SONO ULTRASOUND WIPES®

One Step Cleaner/Disinfectant/Deodorizer/Sanitizer

Description

SONO Ultrasound Wipes™ are fast acting, broad spectrum, one-step, hard surface, hospital disinfectant/cleaners in a convenient, disposable wipe. When used as directed, these wipes deliver effective biocidal action against a market leading number of bacteria, fungi, viruses and exceptional cleaning performance. SONO Ultrasound Wipes™ formulation does not contain high levels of solvent that can cause wipes to dry out and lose their efficacy. SONO Ultrasound Wipes™ can be used to disinfect and sanitize a wide variety of hard surfaces such as ultrasound equipment and transducers, bed rails, call buttons, computer keyboards, door handles and many other high touch surfaces in a healthcare environment. Additionally, these wipes perform well on tables, countertops, lab benches, gurneys, rescue tools, floors, walls, and other non-porous surfaces in hospitals, schools, restaurants, and factories. Still other areas of use are in restaurants, food processing facilities, athletic facilities, restrooms, food storage areas, and transportation vehicles and facilities. SONO Ultrasound Wipes™ can also be used to clean and disinfect non-porous personal protection equipment as well as gym/exercise equipment.

Claim: Fungicide	Contact Time: 4 minutes	Organic Soil: 5%
Test Method:	EPA Guidelines	

Organism	ATCC Strain #
Candida Albicans	9533

Conclusion: All lots of SONO Ultrasound Wipes™ effectively killed Trichophyton mentagrophytes as specified in the test performance standards. SONO Ultrasound Wipes™ are an effective fungicide for nonporous inanimate hard surfaces.

Claim: Mildewstat	Contact Time: 4 minutes	Organic Soil: 5%
Test Method:	EPA Guidelines	

Organism	ATCC Strain #
Aspergillus niger	6275

Conclusion: All lots of SONO Ultrasound Wipes™ were effective against Aspergillus niger under the test conditions outlined in the EPA test performance standards described above. SONO Ultrasound Wipes™ are an effective mildewstat for non-porous inanimate hard surfaces.

Claim: Non Food Contact Sanitizer	Contact Time: 15 Seconds
Test Method: Standard Test Method for efficacy of sanitizers, recommended for inanimate non-food contact surfaces (modification for pre-saturated towelette product application).	

Organism	ATCC Strain #
Staphylococcus aureus	6538
Klebsiella pneumonia	4352
Campylobacter jejuni	29428

Conclusion: All lots of SONO Ultrasound Wipes™ were found to be effective against the above organisms as specified under the test conditions outlined in the EPA test performance standards. SONO Ultrasound Wipes™ are an effective sanitizer for non-food nonporous inanimate hard surfaces.

Summary of Organisms – Etiology ³

Pathogenic Microorganism	Description
Acinetobacter baumannii	Gram negative (spherical shape) bacteria. Occurs in soil, water and sewage. A nosocomial infection can cause septicemia, meningitis and urinary tract infections.
Aspergillus niger	Black mold, found in shower and dressing rooms. Environmental contaminant may also cause aspergillosis.
Burkholderia cepacia	Gram positive bacteria environmental contaminant. Associated with industrial contamination.
Campylobacter jejuni	Gram negative bacteria associated with acute gastroenteritis. Spread by anal/oral route of infection, resulting in diarrhea outbreaks.
Enterobacter aerogenes	Gram negative bacteria spread by anal/oral route of infection. Associated with bacteremia, respiratory, wound and urinary tract infections.
Escherichia coli	Gram negative bacteria spread by anal/oral route of infection, resulting in diarrhea outbreaks. Associated with urinary tract infections and bacteremia.
Herpes Simplex Type 1&2	Lipophilic (enveloped) DNA virus, may result in oral mucocutaneous lesions. Associated with most orofacial herpes and HSV encephalitis.
HBV (Hepatitis B Virus)	Lipophilic (enveloped) DNA virus of the Hepadnaviridae family. Causative agent of Hepatitis B (serum hepatitis).
HCV (Hepatitis C Virus)	Major cause of acute hepatitis and chronic liver disease, including cirrhosis and liver cancer. It is an enveloped RNA virus in the flaviviridae family.
HIV-1 (AIDS Virus)	Lipophilic (enveloped) RNA retrovirus. Human Immunodeficiency Virus. Known to be the etiologic agent of Acquired Immunodeficiency Syndrome (AIDS).
Human Coronavirus	Monogenic group of RNA containing viruses that are associated with respiratory infections.
Influenza A/Brazil	Lipophilic (enveloped) RNA virus. Causative agent in viral flu. Causes flu epidemics in nearly 2 of every 3 years.
Klebsiella pneumoniae	Gram negative bacteria associated with severe pneumonia, bacteremia and urinary tract infections.
Legionella pneumophila	A motile rod-shaped, gram-negative, aerobic facultative intracellular bacterium that causes legionellosis (respiratory infections).
Pseudomonas aeruginosa	Gram negative bacteria identified as a major cause of hospital acquired (nosocomial) infections. Causes wound infections (especially burn), meningitis, pneumonia and eye infections. Required for Hospital Disinfectants.

Summary of Organisms (continued)– Etiology ³

Pathogenic Microorganism	Description
Pseudomonas cepacia	Gram negative bacteria identified as a cause of hospital acquired (nosocomial) infections. Causes septicemia, meningitis, endocarditis, pneumonia, eye wound and urinary tract infections, especially with the chronically ill.
Respiratory Syncytial Virus	Virus that can cause severe lower respiratory infections in children under 2 and mild upper respiratory infections in older children and adults. Inflammation of bronchioles.
Salmonella choleraesuis	Gram negative bacteria associated with acute gastroenteritis and septicemia. Required for Hospital Disinfectants.
Salmonella schottmuelleri	Gram negative bacteria associated with acute gastroenteritis and diarrhea.
Salmonella typhi	Gram negative bacteria associated with acute gastroenteritis and diarrhea. Causative agent for typhoid fever.
Serratia marcescens	Gram negative bacteria associated with urinary tract infections, meningitis and septicemia .
Shigella dysenteriae	Gram negative bacteria directly spread by anal/oral route of infection; indirectly (including food, hands, flies) spread by contaminated food and inanimate objects resulting in bacillary dysentery.
Staphylococcus aureus	Gram positive bacteria identified as a major cause of hospital acquired (nosocomial) infections. Colonizes food and secretes enterotoxins which cause food poisoning after ingestion. Causes wound infections, septicemia, endocarditis, meningitis, osteomyelitis and pneumonia. Required for Hospital Disinfectants.
Streptococcus (Enterococcus) faecalis	Gram positive (Enterococci) bacteria causing hemolysis, urinary tract infections and endocarditis.
Streptococcus (Enterococcus) pyogenes	Gram positive (Enterococci) bacteria causing hemolysis, urinary tract infections and endocarditis. Causative agent of pharyngotonsillitis (sore throats).
Candida Albicans	Candida albicans is a diploid fungus that grows both as yeast and filamentous cells and a causal agent of opportunistic oral and genital infections in humans, and candidal onychomycosis, an infection of the nail plate
Vaccinia	Lipophilic (enveloped) DNA poxvirus; causes poxvirus infections.
Vibrio cholerae	Gram negative, rod shape bacteria; causative agent for cholerae – causes severe diarrhea -- often fatal.
